## SAVE THE DATE

Organised by the "Jean Delaire Institute", the "2021 Jean Delaire Congress" is aimed at orthodontists, orofacial physiotherapists, oro-maxillofacial surgeons, researchers and all specialists in charge of patients suffering from dento-facial dysmorphoses who wish to discover or learn more about Jean Delaire's work, in particular his cephalometric analysis and his in-depth consideration of functional and spine disorders.

The "2021 Jean Delaire Congress" has an international calling as Jean Delaire's architectural and structural craniofacial cephalometric analysis is universal and applies to all ethnicity based reference populations in their diversity. Indeed, Jean Delaire's analysis is based on the reciprocal balance of the skull and face of each patient and not on statistical averages.

This congress is both intended for neophytes who wish to discover Jean Delaire's teaching and for trained practitioners who want to deepen or share their knowledge.

This program consists of workshops devoted to computerized cephalometric analysis, Free Papers for all practitioners wishing to share their experience and Symposia for more in-depth presentations.

New digital technologies in both orthodontics and guided surgery which help the positioning of dental organs and skeletal fragments according to the Delairian sought balance will be widely discussed. Sessions dedicated to syndromic dento-facial dysmorphoses and facial clefts will also be offered.

The purpose of the "2021 Jean Delaire Congress" is to bring together practitioners who sincerely wish to propose the most suitable treatments for stability and beauty taking into account functional disorders and based on the craniofacial balance of each patient.

A moment of exchange between the speakers and participants during the round tables, the "2021 Jean Delaire Congress" also aims to be friendly and laid back especially during the congress evening.

### Organised by

Jean Delaire Institute

### President

B.Philippe
